

# CORPORATE CASEY

## Protect your information from Phil!

### Use Strong Passwords and Multi-Factor

Make sure your accounts have complex, unique passwords (a mix of letters, numbers, and symbols) and change them regularly. Enable multi-factor authentication for an added layer of security.

### Check Links

Check URLs carefully. Ensure the website URL is correct and starts with 'https://' before entering credentials. Don't click on suspicious links. Hover over links to preview the URL to verify.

### Avoid Phishing

Watch out for typos, generic greetings, or urgent language in emails or messages. Don't download attachments or click on links without checking and verifying first.

### Encrypt

Use encryption for both data at rest and in transit to ensure that even if data is intercepted, it remains unreadable. Contact an organization directly if you are unsure about a request.

### Update and Educate

Update your browsers, email clients, and security software. Stay informed about phishing tactics and share your knowledge with others.
